

Jordan R. Taylor

Software & Data Systems Engineer

Seattle, WA | jordan.taylor@email.com | +1 (555) 349-8201 | github.com/jordantaylor

Professional Summary

Analytical Computer Engineering student with a strong emphasis on database modeling, data structures, and backend application development. Skilled at converting complex technical specifications into reliable, user-friendly software solutions.

Core Competencies

Languages:	Python, Java, C++, SQL, Assembly (ALP)
Frameworks & Tools:	Streamlit, PostgreSQL, MySQL, VS Code, Git
Core Expertise:	Database Design (ER Diagrams), Boolean Logic Verification, System Architecture

Technical Projects

Resume Analytics & Skill Evaluation Engine Python, Streamlit, PostgreSQL

- Built an automated resume scanning tool that checks skill coverage against defined engineering job profiles.
- Implemented custom database schema structures to store, query, and rank candidate profiles accurately.

Database Design & Management System Java, MySQL

- Modeled normalized relational schemas with full foreign key constraints and transactional integrity.
- Created visual ER diagrams and user workflows to validate database operations prior to code implementation.

Education & Achievements

Bachelor of Engineering — Computer Engineering Expected 2026

- Dean's Honor List for Academic Excellence (2024, 2025)
- First Place Winner – Annual Engineering Hackathon (Backend System Design)
