

PIYUSH PATEL

Computer Engineering Student | Software & Data Engineer

Email: piyush.engg@email.com | Phone: +91 98765 43210 | GitHub: github.com/PiyushJT | LinkedIn: linkedin.com/in/piyush-patel

PROFESSIONAL SUMMARY

Analytical and highly motivated Final Year Computer Engineering student with a strong foundation in software development, data structures, and database management. Hands-on experience in building full-stack applications, automated analytics tools, and low-level system programs. Adept at leveraging modern Python frameworks, SQL databases, and computer science core principles (OOP, Logic Design, Boolean Algebra) to engineer efficient, scalable, and user-centric solutions.

TECHNICAL SKILLS

Programming: Python, Java, C/C++, Assembly Language Programming (ALP), SQL, HTML5, CSS3
Frameworks & Libraries: Streamlit, Pandas, NumPy, Scikit-learn, PyMuPDF, OpenPyXL, Tkinter
Databases & Tools: PostgreSQL, MySQL, Git & GitHub, VS Code, PgAdmin, Canva, MS Office
Core Concepts: Data Structures & Algorithms (DSA), Database Management Systems (DBMS), Digital Logic Design, Boolean Algebra, Probability & Statistics, Software Engineering

KEY PROJECTS

AI-Powered Resume Analyzer & Skill Extractor / *Python, Streamlit, PostgreSQL, PyMuPDF, Data Structures* Final Year Project

- Designed and deployed an interactive web application to automate resume parsing, skill set extraction, and candidate-job matching.
- Implemented dynamic PDF text extraction pipelines and optimized keyword parsing using custom string and dictionary-based data structures.
- Integrated PostgreSQL for structured data persistence, tracking parsed resume records, applicant metrics, and score history.
- Built an intuitive Streamlit UI featuring interactive analytics, automated skill-gap analysis, and score visualization dashboard.

Dating_Mania_Java — Social Platform Backend & Schema / *Java, MySQL, OOP, JDBC, ER Modeling* Academic Project

- Architected and implemented a Java-based matchmaking application utilizing Object-Oriented Design patterns and robust error handling.
- Designed a normalized relational database schema (ER Diagram, 3NF) handling user profiles, match preferences, and activity logs.
- Implemented custom search algorithms for user matchmaking based on preference matrices and dynamic filtering.
- Documented complete architecture, database structure, and system workflows for technical presentations.

Assembly Language Hardware Simulator & Logic Optimizations / *Assembly Language (ALP), Digital Logic, Boolean Algebra* Coursework Project

- Programmed optimized Assembly Language Programs (ALP) for fundamental logic operations including XNOR, XOR, and ALU subroutines.
- Simplified complex multi-variable Boolean expressions using Karnaugh Maps and Boolean identities, minimizing overall hardware gate counts.
- Verified digital logic circuit implementations with truth tables and schematic validation tools.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Engineering Expected 2026
Gujarat Technological University | **Current CGPA: 8.5/10**

CERTIFICATIONS & LEADERSHIP

- Python for Data Science & Machine Learning:** Completed hands-on training covering Pandas, NumPy, and Scikit-learn.

- **Database Management Systems (DBMS):** Certification in SQL queries, schema design, and query optimization techniques.
- **Academic Excellence:** Successfully completed advanced coursework in Probability & Statistics, Digital Electronics, and Data Structures.
- **Technical Workshop Coordinator:** Organized peer learning sessions on Git/GitHub workflows and Python programming fundamentals.
